CP With Shibam

Day-12

A. YES or YES?

```
#include <bits/stdc++.h>
using namespace std;
int main()
                                                                               int t; cin>>t;
                                                                               while(t--){
                                                                                                                                                           char a,b,c; cin>>a>>b>>c;
                                                                                                                                                         if((a == 'Y' \,|\, |\, a == 'y') \,\&\& \,\, (b == 'E' \,|\, |\, b == 'e') \,\&\& \,\, (c == 'S' \,|\, |\, c == 's')) \,\, cout << "YES\n"; \,else \,\, cout << "NO\n"; \,\, (c == 'S' \,|\, |\, c == 's')) \,\, cout << "YES\n"; \,\, (c == 'S' \,|\, |\, c == 'S') \,\, (c == 'S' \,|\, |\, c == 'S')) \,\, cout << "YES\n"; \,\, (c == 'S' \,|\, |\, c == 'S')) \,\, (c == 'S' \,|\, |\, c == 'S') \,\, (c == 'S')
                                                                            }
A. Maximum GCD
#include<iostream>
using namespace::std;
int main(){
                                                                               int t;
                                                                             cin>>t;
                                                                               while(t--){
                                                                                                                                                           int n;
                                                                                                                                                           cin>>n;
```

 $cout << n/2 << '\n';$

}

}
